Bringing Data into View

Empower PeopleSoft Enterprise Human Resources Users to Answer Their Own Business Questions

Company Overview

Noetix automatically generates metadata from Oracle E-Business Suite, Oracle's Siebel Customer Relationship Management, and Oracle's PeopleSoft Enterprise applications, enabling immediate access to data. More than 1,400 customers worldwide use Noetix to quickly generate the ad hoc operational reports needed for critical business decisions.

Integration Overview

Noetix significantly reduces the time and effort necessary to get operational information from PeopleSoft Enterprise Human Resources into the hands of decision-makers. The solution provides business views and prebuilt reports that automatically conform to the unique configuration of PeopleSoft within a given enterprise, which greatly reduces query and report creation time, improves accuracy and reliability, and empowers business users to build their own complex reports.

NoetixViews for PeopleSoft Enterprise Human Resources incorporates nearly 10 years of customer feedback and experience in human resources reporting. The solution includes more than 60 performance-optimized views, extending the standard reporting solutions for PeopleSoft Enterprise Human Resources.

INTEGRATED WITH

PEOPLESOFT ENTERPRISE

Through the Oracle PartnerNetwork Application Integration Architecture for Partners Initiative, partners with validated integrations are able to provide customers with standards-based product integrations, tested and validated by Oracle. Customers benefit from improved risk management and smoother upgrade capability, leading to a lower total cost of ownership and greater overall satisfaction.

Integration Details

Noetix generates business views that reflect your unique configuration of PeopleSoft Enterprise Human Resources. The solution makes custom fields and lists of values viewable, and names them based on your setup. Installation options, such as position management and multistep grade, will impact the set of view columns that are created.

Noetix identifies indexed columns to help business users create faster-running reports. The solution provides join columns for reports that use data from two or more views, and also includes date columns in each view, enabling users to easily find information for specific days or within date ranges. Noetix includes flag columns to help users easily identify the rows of data that are currently active, intuitively separating them from historical data.

Availability

In the U.S. and Canada, please call +1.866.466.3849.

In Europe, please call +44 0(20) 8610 6023.

Support

Noetix provides a full range of services, including consulting, managed services, education, and customer support.

Reduces Time and Cost

To facilitate a self-service data environment for end users, NoetixViews offers complex business views that incorporate data from multiple tables and schemas within the PeopleSoft Enterprise Human Resources database. This minimizes the time and resources that IT must spend on report creation as well as maintenance and upgrade.

Protects Your Investment

NoetixViews protects reports against the changes to the PeopleSoft data structure that are common during application upgrades and patching, thereby eliminating costly report maintenance.

Provides Comprehensive Help Resources

To guide users through query development, NoetixViews provides a customized help file that includes a comprehensive listing of the views and columns available for each module, as well as sample queries and hints. The help file is generated for each unique installation, so the information it presents is configuration-specific.

Extends PeopleSoft Security to Your Reporting Tool

As with all offerings in the NoetixViews family of products, the open architecture of NoetixViews enables you to use your preferred query and reporting tools, such as Noetix WebQuery, Cognos BI, and Business Objects.

The row-level data security, as defined in PeopleSoft, is automatically integrated with views and reports. Authentication is performed via PeopleSoft user ID and password using business intelligence tools.

NoetixViews works with the PeopleSoft security model to provide secure protection of highly sensitive human resources data, even in Web-based distributed environments. Roles and security profile installation options provide record-level security lock-down capabilities.

Functional Areas of Coverage

NoetixViews for PeopleSoft Enterprise Human Resources provides data related to employee and job records, benefits administration, wage and salary administration, labor information associated with collective labor agreements, and new hire and termination processing. In addition, specified views provide data for managerial-level analysis, budgeting, and planning purposes.
